Version Beacon April 2021

Introduction

This booklet contains the question set for the Cyber Essentials information assurance standard:

Cyber Essentials

Cyber Essentials is a government-backed scheme focussing on five important technical security controls.

Further guidance on the Cyber Essentials scheme can be found at

https://www.cyberessentials.ncsc.gov.uk

Answering the questions

The booklet is intended to help you to understand the questions and take notes on the current setup in your organisation. In order to complete assessment, you must enter your answers via IASME's online assessment platform.

You must answer all questions in order to achieve certification.

Your answers must be approved by a Board level representative, business owner or the equivalent, otherwise certification cannot be awarded.

Need help?

If you need help with understanding the questions, get in contact with IASME on +44 (0)3300 882752 or email info@iasme.co.uk

Alternatively, IASME has a network of Certification Bodies who are skilled information assurance companies who can provide advice on the standards and who can help you make changes to your setup in order to achieve compliance. Visit the IASME website at www.iasme.co.uk to find you nearest Certification Body.

Your Company

In this section we need to know a little about how your organisation is set up so we can ask you the most appropriate questions.

AI.I. What is your organisation's name (for companies: as registered with Companies House)? Please provide the full registered name for the company being certified. If you are certifying the local entity of a multinational company, provide the name of the local entity as per Companies House Registration.

Certification should cover one organisation; there are occasions when a certificate can be issued to more than one company. This will be determined by the IT infrastructure. An example would be where all the companies within a Company Group share the same IT infrastructure.

If a client requires certification for a company that has more than one subsidiary registered with Companies House under different names and registration numbers, as long as they share the same network boundary, they can all be entered within one certificate.

For example: The Stationery Group, incorporating subsidiaries The Paper Mill and The Pen House. Adding a Trading name to the certification: If an organisation operates under a different trading name to the registered company name, this may also be entered. For example: registered Company trading as Company Y. The answer provided to A1.1 will be used to generate the CE certificate.
[Notes]
A1.2. What is your organisation's registration number (if you have one)? If you are a UK limited company, your registration number will be provided by Companies House, in the Republic of Ireland, this will be provided by Companies Registration Office. Charities, partnerships and other organisations should provide their registration number if applicable. [Notes]
A1.3. What is your organisation's address (for companies: as registered with Companies House)? Please provide the legal registered address for your organisation, if different from the main operating location. [Notes]
[

A1.4. What is your main business? *Please summarise the main occupation of your organisation.*

Agriculture, Forestry and Fishing	Real estate
Mining and Quarrying	Professional, scientific and technical
Manufacturing	Administration and support services
Electricity, Gas, Steam and Air-conditioning	Public administration and defence
Supply	Compulsory social security
Water supply, Sewerage, Waste management and Remediation	Education
Construction	Human Health and Social Work
Wholesale and Retail trade	Arts Entertainment and Recreation
Repair of motorcars and motorcycles	Other service activities
Transport and storage	Activities of households as employers; undifferentiated goods and services
Accommodation and food services	producing for households for own use
Information and communication	Activities of extraterritorial organisations and bodies
Financial and insurance	and bodies
[Notes]	

A1.5. What is your website address? Please provide your website address (if you have one). This can be a Facebook/LinkedIn page if you prefer.
[Notes]
Al.6. What is the size of your organisation? Based on the EU definitions of Micro (<10 employees, < €2m turnover), Small (<50 employees, < €10m turnover), Medium (<250 employees, < €50m turnover) or Large.
[Notes]
A1.7. How many staff are home workers?
Any employee contracted or legally required to work at home for any period of time at the time of the assessment, needs to be classed as a home worker for Cyber Essentials.
[Notes]
Al.8. Is this application a renewal of an existing certification or is it the first time you have applied for certification? The Cyber Essentials certification requires annual renewal. If you have previously achieved Cyber Essentials please select "Renewal". If you have not previously achieved Cyber Essentials please select "First Time Application".
[Notes]
A1.9. What is your main reason for applying for certification? Please let us know the main reason why you are applying for certification. If there are multiple reasons, please select the one that is most important to you. This helps us to understand how people are using our certifications. [Notes]
A1.10. Have you read the 'Cyber Essentials Requirements for IT Infrastructure' document? Document is available on the NCSC Cyber Essentials website and should be read before completing this question set. https://www.ncsc.gov.uk/files/Cyber-Essentials-Requirements-for-IT-infrastructure-2-2.pdf
[Notes]

Scope of Assessment

In this section, we need you to describe the elements of your organisation which you want to certify to this accreditation. The scope should be either the whole organisation or an organisational subunit (for example, the UK operation of a multinational company). All computers, laptops, servers, mobile phones, tablets and firewalls/routers that can access the internet and are used by this organisation or sub-unit to access organisational data or services should be considered "in-scope". All locations that are owned or operated by this organisation or sub-unit, whether in the UK or internationally should be considered "in-scope".

	cations that are owned or operated by this organisation or sub-unit, whether in the UK or ationally should be considered "in-scope".
A2.1	Does the scope of this assessment cover your whole organisation?
	Please note: Your organisation is only eligible for free Cyber Insurance if your assessment covers your whole company, if you answer "No" to this question you will not be invited to apply for insurance.
	hole organisation would include all divisions and all people and devices that use business data.
[Not	esj
A2.2	If it is not the whole organisation, then what scope description would you like to appear on your certificate and website?
	ope description should provide details of any areas of your business that have internet access and have been ad from the assessment (for example, "whole company excluding development network").
[Not	res]
A2.5.	Please describe the geographical locations of your business which are in the scope of this assessment.
	ould provide either a broad description (i.e. All UK offices) or simply list the locations in scope (i.e. Manchester and w retail stores).
[Not	res]

IP addresses, MAC addresses or serial numbers.

[Notes]

CONFIDENTIAL WHEN COMPLETED

A2.6. Please list the quantities of laptops, computers and virtual desktops within the scope of this assessment. You must include model and operating system version for all devices. For Windows 10 devices the Edition and Feature version are also required.

	rechnical information.
[Note	
	Please list the quantities of servers, virtual servers and virtual server hosts (hypervisor). You must include the operating system.
	st the quantity of all servers within scope of this assessment. For example: 2 x VMware ESXI 6.7 hosting 8 virtual s 2016 servers; 1 x MS Server 2019; 1 x Redhat Enterprise Linux 8.3
[Note	25]
	Please list the quantities of tablets and mobile devices within the scope of this assessment. You must include model and operating system versions for all devices.
	ts and mobile devices that are used for accessing business data and have access to the internet must be included
Note]	ope of the assessment. You do not need to provide serial numbers, mac addresses or other technical information.
_	
A2.8.	Please provide a list of the networks that will be in the scope for this assessment.
Network	uld include details of each network used in your organisation including its name, location and its purpose (i.e. Mai at Head Office for administrative use, Development Network at Malvern Office for testing software, (home network - based in UK). You do not need to provide IP addresses or other technical information.
[Note	25]
LINOTE	
[INOIC	
A2.9.	Please provide a list of network equipment that will be in scope for this assessment (including firewalls and routers). You must include make and model of each device listed.

A2.10. Please provide the name and role of the person who is responsible for managing the information systems in the scope of this assessment?

This should be the person who influences and makes decisions about the computers, laptops, servers, tablets, mobile phones and network equipment within your organisation. This person must be a member of your organisation and cannot be a person employed by your outsourced IT provider.

be a person employed b	y your outsourceuri pro	wider.		
[Notes]				

Insurance

All organisations with a head office domiciled in the UK and a turnover of less than £20 million get automatic cyber insurance if they achieve Cyber Essentials certification. The cost of this is included in the assessment package but you can opt out of the insurance element if you choose. This will not change the price of the assessment package. If you want the insurance then we do need to ask some additional questions and these answers will be forwarded to the broker. The answers to these questions will not affect the result of your Cyber Essentials assessment. It is important that the insurance information provided is as accurate as possible and that the assessment declaration is signed by Board level or equivalent, to avoid any delays to the insurance policy being issued.

A3.1.	Is your head office domiciled in the UK and is your gross annual turnover less than £20m?
This qu	estion relates to the eligibility of your company for the included cyber insurance
[No	tes]
A3.2.	If you have answered "yes" to the last question then your company is eligible for the included cyber insurance if you gain certification. If you do not want this insurance element please opt out here.
	st of this is included in the assessment package and you can see more about it at
	/www.iasme.co.uk/index.php/cyberessentials profile/automatic-insurance-cover.
[No	tes]
A3.3.	What is your total gross revenue? Please provide figure to the nearest £100K. You only need to answer this question if you are taking the insurance.
	swer to this question will be passed to the Insurance Broker in association with the Cyber Insurance you will receive ification. Please be as accurate as possible - figure should be to the nearest £100K.
[No	tes]
A3.4.	Is the company or its subsidiaries any of the following: medical, call centre, telemarketing, data processing (outsourcers), internet service provider, telecommunications or an organisation regulated by the FCA? You only need to answer this question if you are taking the insurance.
	swer to this question will be passed to the Insurance Broker in association with the Cyber Insurance you will receive ification.
[No	tes]

A3.5.	Does the company have any domiciled operation or derived revenue from the territory or
	jurisdiction of Canada and / or USA?

[Not	ree Broker in association with the Cyber Insurance you will receive at certification. Tees]
A3.6.	What is the organisation email contact for the insurance documents? You only need to answer this question if you are taking the insurance.
	swer to this question will be passed to the Insurance Broker in association with the Cyber Insurance you will receive fication and they will use this to contact you with your insurance documents and renewal information.
[Not	res]

Office Firewalls and Internet Gateways

Firewall is the generic name for software or hardware which provides technical protection between your systems and the outside world. There will be a firewall within your internet router. Common internet routers are BT Home Hub, Virgin Media Hub or Sky Hub. Your organisation may also have set up a separate hardware firewall device between your network and the internet. Firewalls are powerful devices and need to be configured correctly to provide effective security.

powerful devices and need to be configured correctly to provide effective security.
Questions in this section apply to: Hardware Firewall devices, Routers, Computers, Laptops and Servers.
A4.1. Do you have firewalls at the boundaries between your organisation's internal networks and the internet?
You must have firewalls in place between your office network and the internet. You should also have firewalls in place for home-based workers, if those users are not using a Virtual Private Network (VPN) connected to your office network.
[Notes]
A4.2. When you first receive an internet router or hardware firewall device it will have had a default password on it. Has this initial password been changed on all such devices? How do you ensure that the password has been changed?
The default password must be changed on all routers and firewalls, including those that come with a unique password preconfigured (i.e. BT Hub) You can change the default password by logging into the web interface for the device (often located at 192.168.1.1 or 192.168.1.254).
[Notes]
A4.3. Is the new password on all your internet routers or hardware firewall devices at least 8 characters in length and difficult to guess?
A password that is difficult to guess will be unique and not be made up of common or predictable words such as "password" or "admin", or include predictable number sequences such as "12345".
[Notes]

A4.4.	Do you change the password when you believe it may have been compromised? How do you ensure that the password has been changed?
	ords may be compromised if there has been a virus on your system or if the manufacturer notifies you of a security ess in their product. You should be aware of this and know how to change the password if this occurs.
[Not	
A4.5.	Do you have any services enabled that can be accessed externally from your internet router or hardware firewall?
exampi referre	es your firewall may be configured to allow a system on the inside to become accessible from the internet (for le: a VPN server, a mail server, an FTP server or a service that is accessed by your customers). This is sometimes d to as "opening a port". You need to show a business case for doing this because it can present security risks. If you ot enabled any services, answer "No". By default, most firewalls block all services.
[Not	tes]
A4.5.1	Do you have a documented business case for all of these services?
	siness case should be documented and recorded. A business case must be signed off at board level and associated eviewed regularly.
[Not	tes]
A4.6.	If you do have services enabled on your firewall, do you have a process to ensure they are disabled in a timely manner when they are no longer required? Describe the process.
should	no longer need a service to be enabled on your firewall, you must remove it to reduce the risk of compromise. You have a process that you follow to do this (i.e. when are services reviewed, who decides to remove the services, who that it has been done).
[Not	·
A4.7.	Have you configured your internet routers or hardware firewall devices so that they block all
	other services from being advertised to the internet?
	ault, most firewalls block all services from inside the network from being accessed from the internet, but you need to your firewall settings.
[Not	

A4.8.	Are your internet routers or hardware firewalls configured to allow access to their configuration
	settings over the internet?

Sometimes organisations configure their firewall to allow other people (such as an IT support company) to change the settings via the internet. If you have not set up your firewalls to be accessible to people outside your organisations or your device configuration settings are only accessible via a VPN connection, then answer "no" to this question.				
[Notes]				
A4.9. If yes, is there a documented business requirement for this access?				
You must have made a decision in the business that you need to provide external access to your routers and firewalls. This decision must be documented (i.e. written down).				
[Notes]				
A4.10. If yes, is the access to the settings protected by either two-factor authentication or by only allowing trusted IP addresses to access the settings? List which option is used.				
If you allow direct access to configuration settings via your router or firewall's external interface, this must be protected b one of the two options.				
[Notes]				
A4.11. Do you have software firewalls enabled on all of your computers, laptops and servers?				
Your software firewall needs be configured and enabled at all times, even when sitting behind a physical/virtual boundary firewall in an office location. You can check this setting on Macs in the Security & Privacy section of System Preferences. On Windows laptops you can check this by going to Settings and searching for "windows firewall". On Linux try "ufw status".				
[Notes]				
A4.12. If no, is this because software firewalls are not commonly available for the operating system you are using? Please list the operating systems.				
Only very few operating systems do not have software firewalls available. Examples might include embedded Linux systems or bespoke servers. For the avoidance of doubt, all versions of Windows, macOS and all common Linux distributions such as Ubuntu do have software firewalls available.				
[Notes]				

Secure Configuration

Computers are often not secure upon default installation. An 'out-of-the-box' set-up can often include an administrative account with a standard, publicly known default password, one or more unnecessary user accounts enabled (sometimes with special access privileges) and pre-installed but unnecessary applications or services. All of these present security risks.

A5.5. Do you run software that provides sensitive or critical information (that shouldn't be made public) to users across the internet?

Your business might run software that allows people outside the company on the internet to access information within your business via an external service. This could be a VPN server, a mail server, or an internet application that you provide to your customers as a product. In all cases these applications provide information is confidential to your business and your customers and that you would not want to be publicly accessible. This question does not apply to cloud services such as Google Drive, Office365 or Dropbox. If you only use such services and do not run your own service you should answer no to this question.

[Not	es]
	If yes, do you ensure all users of these services use a password of at least 8 characters and that your systems do not restrict the length of the password?
The lon [Not	ger a password, the more difficult it is for cyber criminals to guess (or brute-force) it. [es]
А5.7.	If yes, do you ensure that you change passwords if you believe that they have been compromised?
	ords may be compromised if there has been a virus on your system or if the manufacturer notifies you of a security cess in their product. You should be aware of this and know how to change the password if this occurs. Tes]
A5.8.	If yes, are your systems set to lockout after ten or fewer unsuccessful login attempts, or limit the number of login attempts to no more than ten within five minutes?
passwo	ernal service that you provide must be set to slow down to stop attempts to log in if the wrong username and rd have been tried a number of times. This reduces the opportunity for cyber criminals to keep trying different ords (brute-forcing) in the hope of gaining access.
[Not	res]
L А5.9.	If yes, do you have a password policy that guides all your users?
for mul	ssword policy must include: guidance on how to choose non-guessable passwords, not to use the same password tiple accounts, which passwords may be written down and where they can be stored, and if they may use a ord manager.
[Not	

A5.10. Is "auto-run" or "auto-play" disabled on all of your systems?

This is a setting which automatically runs software on a DVD or memory stick. You can disable "auto-run" or "auto-play"
on Windows through Settings, on macOS through System Preferences and on Linux through the settings app for your
distribution. It is acceptable to choose the option where a user is prompted to make a choice about what action will occur
each time they insert a memory stick. If you have chosen this option you can answer yes to this question.

each time they insert a memory stick. If you have chosen this option	you can anone yes to time question
[Notes]	

Security Update Management

To protect your organisation you should ensure that all your software is always up-to-date with the latest security updates. If, on any of your in-scope devices, you are using an operating system which is no longer supported (For example Microsoft Windows XP/Vista/2003/Windows 7/Server 2008, MacOS High Sierra, Ubuntu 17.10), and you are not being provided with updates from the vendor, then you will not be awarded certification. Mobile phones and tablets are in-scope and must also use an operating system that is still supported by the manufacturer.

Questions in this section apply to: Servers, Computers, Laptops, Tablets, Mobile Phones, Routers and Firewalls.

A6.1.	Are all operating systems and firmware on your devices supported by a supplier that produces regular fixes for any security problems?
systems	ist the operating systems you use so that the assessor can understand your setup and verify that all your operating are still in support. Older operating systems that are out of support include Windows XP/Vista/2003, mac OS El and Ubuntu Linux 17.10
[Note	
A6.2.	Are all applications on your devices supported by a supplier that produces regular fixes for any security problems?
Unsuppo	ications used by an organisation must be supported by a supplier who provides regular security updates. orted applications must be removed from devices. This includes frameworks and plugins such as Java, Adobe and .NET
[Note	es]
A6.2.1	Please list your Internet Browser/s
	ist all internet browsers you use so that the assessor can understand your setup and verify that they are in . For example: Chrome Version 89; Safari Version 14
[Note	es]
A6.2.2	Please list your Malware Protection
	ist all Malware Protection and versions you use so that the assessor can understand your setup and verify that in support. For example: Sophos Endpoint Protection V10; Windows Defender; Bitdefender Internet Security 2020

Please list all Email applications and versions you use so that the assessor can understand your setup and verify that they

A6.2.3 Please list your Email Applications installed on end user devices and sever.

are in support. For example: MS Exchange 2016, Outlook 2019	
[Notes]	
A6.2.4 Please list all Office Applications that are used to create organisational data.	
Please list all Office Applications and versions you use so that the assessor can understand you setup and ve are in support. For example: MS 365; Libre office, Google workspace, Office 2016.	erify that they
[Notes]	
A6.3. Is all software licensed in accordance with the publisher's recommendations?	
All software must be licensed. It is acceptable to use free and open source software as long as you comply w licensing requirements.	vith any
[Notes]	
A6.4. Are all high-risk or critical security updates for operating systems and firmware installed days of release?	ed within I
You must install any such updates within 14 days in all circumstances. If you cannot achieve this requiremer you will not achieve compliance to this question. You are not required to install feature updates or optional order to meet this requirement, just high-risk or critical security updates.	
[Notes]	
ACAL Are all undates applied for appreting austanes by appliing auto undates?	
A6.4.1 Are all updates applied for operating systems by enabling auto updates?	
Most devices have the option to enable auto updates. This must be enabled on any device where possible.	
[Notes]	

A6.4.2 Where auto updates are not being used, how do you ensure all high-risk or critical security updates of all operating systems and firmware are applied within 14 days of release?

It is not always possible to apply auto updates. Please indicate how any updates are applied when auto updates is not configured

[Note	es]
L A6.5.	Are all high-risk or critical security updates for applications (including any associated files and any plugins such as Java, Adobe Reader and .Net.) installed within 14 days of release?
you will	st install any such updates within 14 days in all circumstances. If you cannot achieve this requirement at all times, not achieve compliance to this question. You are not required to install feature updates or optional updates in meet this requirement, just high-risk or critical security updates.
[Note	
L A6.5.1	Are all updates applied for applications by enabling auto updates?
Most de	vices have the option to enable auto updates. Auto updates should be enabled where possible.
[Note	es]
A6.5.2	Where auto updates are not being used, how do you ensure all high-risk or critical security updates of all applications are applied within 14 days of release?
Please ii	ndicate how updates are applied when auto updates has not been configured.
[Note	es]
A6.6.	Have you removed any applications on your devices that are no longer supported and no longer receive regular fixes for security problems?
	st remove older applications from your devices when they are no longer supported by the manufacturer. Such ions might include older versions of web browsers, frameworks such as Java and Flash, and all application e.
[Note	

User Accounts

It is important to only give users access to the resources and data necessary for their roles, and no more. All users need to have unique accounts and should not be carrying out day-to-day tasks such as invoicing or dealing with e-mail whilst logged on as a user with administrator privileges which allow significant changes to the way your computer systems work.

Questions in this section apply to: Servers, Computers, Laptops, Tablets and Mobile Phones.

A7.1.	Are users only provided with user accounts after a process has been followed to approve their
	creation? Describe the process.
	ast ensure that user accounts (such as logins to laptops and accounts on servers) are only provided after they have approved by a person with a leadership role in the business.
[Not	tes]
۸٦٥	Can you anly access lantane, commutate and converse in your expenientian (and the applications
A/.2.	Can you only access laptops, computers and servers in your organisation (and the applications they contain) by entering a unique user name and password?
You mu	ist ensure that no devices can be accessed without entering a username and password. Users cannot share ts.
[Not	res]
A7.3.	How do you ensure you have deleted, or disabled, any accounts for staff who are no longer with your organisation?
When d	an individual leaves your organisation you need to stop them accessing any of your systems.
[Not	res]
A7.4.	Do you ensure that staff only have the privileges that they need to do their current job? How do
/ \/ . 1.	you do this?
	a staff member changes job role you may also need to change their permissions to only access the files, folders and tions that they need to do their day-to-day work.
[Not	

Administrative Accounts

User accounts with special access privileges (e.g. administrative accounts) typically have the greatest level of access to information, applications and computers. When these privileged accounts are accessed by attackers they can cause the most amount of damage because they can usually perform actions such as install malicious software and make changes. Special access includes privileges over and above those of normal users.

It is not acceptable to work on a day-to-day basis in a privileged "administrator" mode. Questions in this section apply to: Servers, Computers, Laptops, Tablets and Mobile Phones. A7.5. Do you have a formal process for giving someone access to systems at an "administrator" level? Describe the process. You must have a formal, written-down process that you follow when deciding to give someone access to systems at administrator level. This process might include approval by a person who is an owner/director/trustee/partner of the organisation. [Notes] A7.6. How do you ensure that administrator accounts are used only to carry out administrative tasks (such as installing software or making configuration changes)? You must ensure that you use separate administrator accounts from the standard user account, such as when installing software. Using administrator accounts all-day-long exposes the device to compromise by malware. [Notes] A7.7. How do you ensure that administrator accounts are not used for accessing email or web browsing? You must ensure that administrator accounts are not used to access websites or download email. Using such accounts in this way exposes the device to compromise by malware. Software and Update downloads should be performed as a standard user and then installed as an Administrator. You may not need a technical solution to achieve this, it could be based on good policy and procedure as well as regular training for staff. [Notes]

A7.8. Do you formally track which users have administrator accounts in your organisation? You must track by means of list or formal record all people that have been granted administrator accounts.

[Notes]			

A79	Do	you review who	should have	administrative	access on a	regular basis?
1/./.	\mathcal{L}	you icvievy vviio	3110did Have	administrative	access on a	i Cguiai Dasisi

·
You must review the list of people with administrator access regularly. Depending on your business, this might be monthly, quarterly or annually. Any users who no longer need administrative access to carry out their role should have it removed.
[Notes]
A7.10. Have you enabled two-factor authentication for access to all administrative accounts?
If your systems supports two factor authentication (where you receive a text message, a one-time code, use a finger-print reader or facial recognition in addition to a password), then you must enable this for administrator accounts.
[Notes]
A7.11. If no, is this because two-factor authentication is not available for some or all of your devices or systems? List the devices or systems that do not allow two-factor authentication.
You are not required to purchase any additional hardware or install additional software in order to meet this requirement. Most standard laptops do not have two-factor authentication available. If your systems do not have two-factor authentication available answer yes to this question.
[Notes]

Malware protection

Malware (such as computer viruses) is generally used to steal or damage information. Malware are often used in conjunction with other kinds of attack such as 'phishing' (obtaining information by confidence trickery) and social network sites (which can be mined for information useful to a hacker) to provide a focussed attack on an organisation. Anti-malware solutions (including anti-virus) are available from commercial suppliers, some free, but usually as complete software and support packages.

Malware are continually evolving, so it is important that the supplier includes both malware signatures and heuristic detection facilities which are updated as frequently as possible. Anti-malware products can also help confirm whether websites you visit are malicious.

Questions in this section apply to: Computers, Laptops, Tablets and Mobile Phones.

- A8.1. Are all of your computers, laptops, tablets and mobile phones protected from malware by either
 - A having anti-malware software installed and/or
 - B limiting installation of applications to an approved set (i.e. using an App Store and a list of approved applications) and/or
 - C application sandboxing (i.e. by using a virtual machine)?

Please select all the options that are in use in your organisation across all your devices. Most organisations that use smartphones and standard laptops will need to select both option A and B.
[Notes]

A8.2. If Option A: Where you have anti-malware software installed, is it set to update daily and scan files automatically upon access?

This is usually the default setting for anti-malware software. You can check these settings in the configuration screen for your anti-virus software. You can use any commonly used anti-virus product, whether free or paid-for as long as it can meet the requirements in this question. For the avoidance of doubt, Windows Defender is suitable for this purpose.

nce of doubt, Windows Defender is suitable for this purpose.

A8.3. If Option A: Where you have anti-malware software installed, is it set to scan web pages you visit and warn you about accessing malicious websites?

Your anti-virus software should have a plugin for your internet browser or for the operating system itself that prevents access to known malicious websites. On Windows 10, SmartScreen can provide this functionality.

[Notes]		

A8.4. If Option B: Where you use an app-store or application signing, are users restricted from installing unsigned applications?

	ault, most mobile phones and tablets restrict you from installing unsigned applications. Usually you have to "root" break" a device to allow unsigned applications.
[No	tes]
A8.5.	If Option B: Where you use an app-store or application signing, do you ensure that users only install applications that have been approved by your organisation and do you document this list of approved applications?
include	ust create a list of approved applications and ensure users only install these applications on their devices. This is employee-owned devices. You may use Mobile Device Management (MDM) software to meet this requirement If are not required to use MDM software if you can meet the requirements using good policy, process and training of

Achieving compliance with the Cyber Essentials profile or the IASME governance standard indicates that your organisation has taken the steps set out in the HMG Cyber Essentials Scheme documents or the broader IASME Governance standard. It does not amount to an assurance that the organisation is free from cyber vulnerabilities and neither IASME Consortium Limited nor the Certification Body accepts any liability to certified organisations or any other person or body in relation to any reliance they might place on the certificate.

A "pass" under the GDPR assessment does not mean that you are assessed as being legally compliant. It indicates only that your organisation is starting on the pathway to compliance and is committed to ensuring 'privacy by design'.

You should ensure that your organisation obtains specialist legal advice on the GDPR as on any other data protection issue. This GDPR assessment is not legal advice and must not be relied upon as such and IASME accepts no liability for loss or damage suffered as a result of reliance on views expressed here.

The full extent of the GDPR regime and its application post Brexit (for example) is not yet fully known but the assessment addresses what we consider to be key elements and to help organisations demonstrate progress towards meeting the policy objectives that underpins the GDPR.

If you are awarded a certificate you will also be sent a badge to use in correspondence and publicity. You must accept the conditions of use.
